The Company

BVM Limited was formed in 1989 as a design and manufacturing company specialising in bus based systems for real-time embedded applications. The business has evolved over the years and today is a thriving operation in the competitive and fast-moving computer technology market-place specialising in embedded control and information display systems.

Strategic alliances with Taiwanese and US companies enables BVM to operate as a global company ensuring good access to the latest technologies at competitive prices.

Today BVM's activities include supply of CPU and peripherals, custom board and system design, manufacture and integration. Specialised

systems have been supplied to a number of high profile companies and although hidden behind our customers brand names, feature in many everyday situation such as airports, railway stations, motorways and supermarkets.

Market sectors serviced

BVM has provided system into a wide variety of industries. The predominant factor is the need for a sophisticated specialist design which can be embedded or integrated within our customers product or project requirement. Live systems in use include the following industries with new applications being regularly added:-

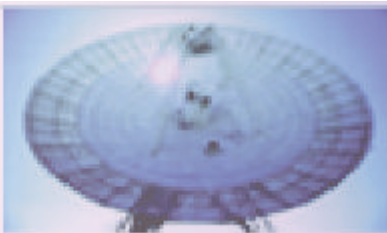

- Defence & government
- Petro-chem., Oil & Utilities
- Industrial control & factory automation
- Broadcast, studio & distribution
- Road, rail & air transport
- EPOS & Kiosks
- Security, surveillance & banking
- Telecoms & Enterprise
- Medical Instruments
- Digital signage

Systems Integrator

BVM's system integration capabilities have been developed in response to customers of standard and custom boards requiring a supplier who would "finish the system".

At one level the company can integrate standard boards and chassis, install software and perform final test. In other applications custom enclosures have been designed to fit into a customers final solution. This can include painting in the customers house colour, adding their logo, installing their application and even drop shipping directly to their end customer.

Drawing on many years of experience of system integration and with sourcing contacts worldwide, BVM is able to provide the one-stop solution for its customers allowing each to benefit from increased volume purchase and technical knowhow.

Technical Support

At BVM we pride ourselves in offering a rapid response to both pre & post-sales enquiries whether by e-mail, telephone or fax. Above all when the going gets tough you can speak to a knowledgeable engineer rather than a machine. We don't have all the answers but we will do our utmost to resolve any issues quickly and efficiently drawing on design or manufacturing resources as appropriate.

The needs of long term projects are well recognised at BVM. We can provide extended support plans to assist customers through development, manufacture and lifetime field implementation. Although, in this fast changing environment we cannot guarantee product longevity, we do our utmost to manage obsolescence and protect our customers by giving as much notice as possible and securing alternatives whenever possible.

Quality Assurance

Since its inception BVM has operated a stringent Quality Management System and gained ISO9001 certification in May 1995. This was subsequently updated to ISO9000:2008. Today the well defined procedures and working codes combined with a computer based planning and control systems ensure a consistent and reliable product is delivered on schedule.
